Subject: Dynegy Power Block Demolition

George, when we were talking last week about the Dynegy matter, you asked about the PCB concentrations in the sludge that was removed from the trenches before they were power-washed. The data are presented below (all Aroclor 1254). These samples were collected for profiling purposes only since a decision had already been made to send the waste to a PCB Landfill in Beatty, Nevada. Nevertheless, these data support the conclusion that the concentrations of PCBs in the trenches was very low.

Bin 3184 = 0.65 mg/kg (ppm)
Bin 3240 = 0.52
Bin 3241 = 0.47
Bin 3350 = 0.65
Bin 3395 = 0.17

I'll be in the office tomorrow and will give you a call to see how your review is progressing. Thanks again for your help. Meg
